

### App :

- When you skip a series of questions to switch to professional mode, you are taken straight to the last page
- **Already solved:** If you exit the form to switch to professional mode, the app crashes; when you return to it, you are in professional mode without even having answered the questionnaire
- In the questionnaire: step 2 of 6 – how are categories selected once you've chosen the service? These aren't the categories and sub-categories you've created
- In the questionnaire: step 3 of 6 (work area), there's a 'department' line showing the services you can offer, whereas it should be the regional departments (remove this line)
- When sharing a post or a profile, no link is created
- The categories and sub-categories, when creating a listing, are not translated into French
- Review the translation when creating a listing
- I created a listing, but it didn't work. Is this because I didn't complete the questionnaire?
- When creating a listing → pricing → by service → duration should be selectable in days / minutes / hours
- The notifications icon shows that there is a notification even though it has already been read
- When booking a listing, a full calendar is required as it is not possible to book a year in advance (very important for major events)
- The location feature does not work. I created a listing in Paris with a 50 km radius and was able to book in Nice, which is over 500 km from Paris.
- The location of the service isn't shown on the listing, making it impossible for the customer to know the location and boundaries of the listing
- **Already solved:** I sent a message to the service providers and this triggered a message to Mr Mohosin.
- **Already solved:** The messaging system isn't working

### Admin dashboard :

- In the "project Idea" part, there is no the "Photography" category.
- I try to change the subcategory but nothing happen. Is a certain amount of time needed to work ?
